

Easier routines and less paper consumption for Stena Recycling with Pagero Search

CHALLENGE

Stena Recycling is a company within the Stena Metall Group. Every month Stena Recycling receives about 1500 payments. Having a great number of payments also lead to incorrect payments or settlements. The arising incorrect payments can be up to 70 a day and were earlier printed out on paper sheets and thereafter filed. At a rough estimate the incorrect payments ended in 60 printed paper sheets a day.

SOLUTION

By means of the service Bankgiro Receivables from the Swedish giro system Bankgirot, the incoming payments are shown totally electronical in a standard format. The Bankgiro incoming payments are collected by Pagero BgCom and thereafter directly imported in their ERP system Navision. Incorrect incoming amounts, settlements or partial payments are shown as a list in Navision. Pagero Search was therefore procured as a complement to Navision to easier solve the incorrect payments and derive the information. By stating the bankgiro number, date and amount Pagero Search directly shows the amount payed and when. In that way the incorrect payments can easily be derived and corrected.

RESULT

The incoming payment routines have been more effective using Pagero Search. Receiving everything electronical means that Stena Recycling no longer need to look through papers after the incorrect payments as everything is put together and sent to them electronically. Even though the incorrect payments have not been better they are considerably easier to find and unclear.

The routines have been simpler and only that saves time. Above all the changeover to Pagero Search implies a reduction in the use of paper for Stena Recycling. 60 printed paper sheets a day for a whole year means a saving of 15 000 paper sheets a year!

"Pagero Search enables us in an easier way to put the payments in order and it is easier to go back and look at the information instead of manually search in files".

- Emelie Abrahamsson, Accountant, Stena Recycling

COMPANY PROFILE

Company: Stena Recycling

Industry: Recycling

ERP/Workflow: Navision

Solution: Pagero Search

About Stena Metall:

The Stena Metall Group recycles and processes metals, paper, electronics, hazardous waste and chemicals. Its operations also include international trading in steel, metals and oil.
